OVERVIEW

What Evitan POS is

Evitan POS is a native desktop point-of-sale app for a single retail business. Everything — products, sales, and reports — lives in a local database on the machine, so it keeps working with no internet, no accounts, and no monthly service. It's designed to be trustworthy with money and stock: the records it keeps can be relied on, audited, and backed up.

Owner

Full access — including item costs, business settings, and database backups. There is always exactly one Owner.

Admin

Runs day-to-day operations: inventory, reports, users, and after-sales. Never sees item cost.

Cashier

Sells at the register, looks up products and past sales. View-only on inventory; no cost, no admin tools.

Built-in guarantees

- ✓ **Sales history is permanent.** A completed sale is never edited or deleted — corrections happen as returns or defects.
- ✓ **Gapless receipt numbers.** Every sale gets a continuous, zero-padded serial (BIR-style) that never resets or skips.
- ✓ **Stock can't go negative.** On-hand is derived from an append-only ledger and blocked from overselling at the point of sale.
- ✓ **Everything is audited.** Sales, refunds, stock changes, imports, user and settings edits, and backups all leave a trail.
- ✓ **Your data is yours.** The whole database can be backed up and restored — including to an external drive.

GETTING STARTED

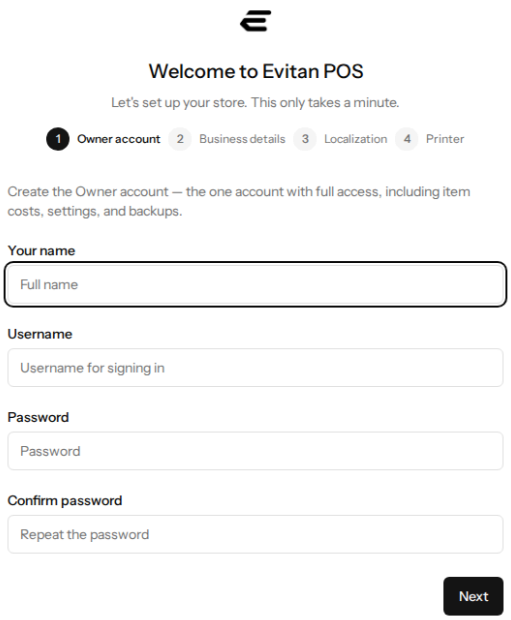

First-run setup

First run only

What it does — On a brand-new install, Evitan opens a one-time setup wizard instead of a login screen. It creates the Owner account and captures the business identity in a single guided flow, so the app ships with no default password to change or leak.

HOW TO USE IT

1. Create the **Owner account** — name, username, and password.
2. Add **business details** — name, address, and TIN.
3. Choose **localization** — timezone and currency symbol.
4. Optionally configure a **receipt printer**, or skip it. Finish, and you're signed in and ready to sell.

GETTING STARTED

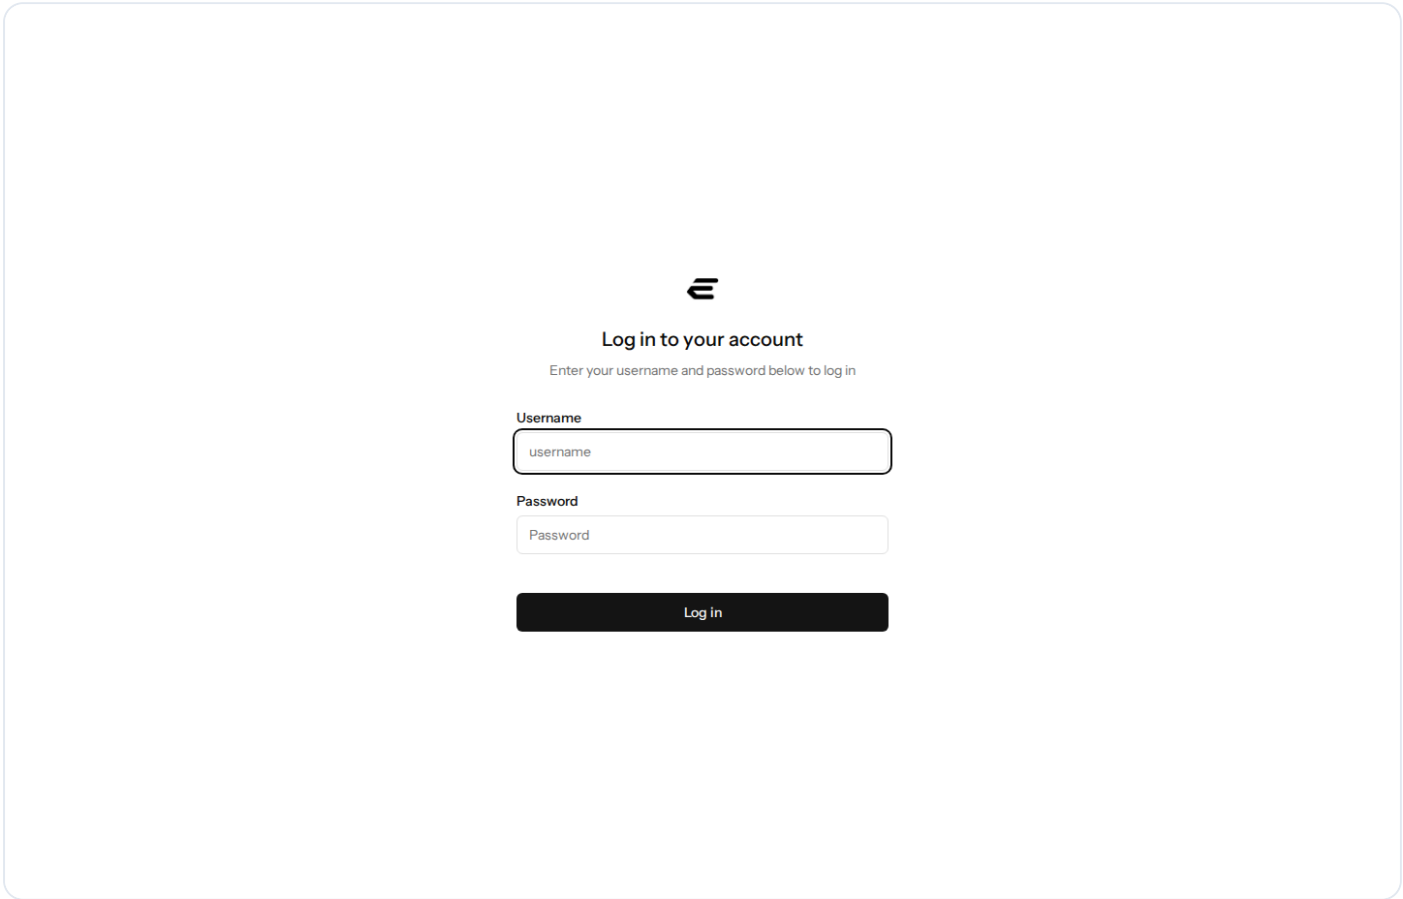

Signing in

All staff

What it does — After setup, staff sign in with a username and password. There is no email and no self-registration, and only one active session is allowed per user at a time.

HOW TO USE IT

- Enter your **username** and **password**, then select **Log in**.
- Forgot a password? An Admin or the Owner can reset it from User Management.

SELLING

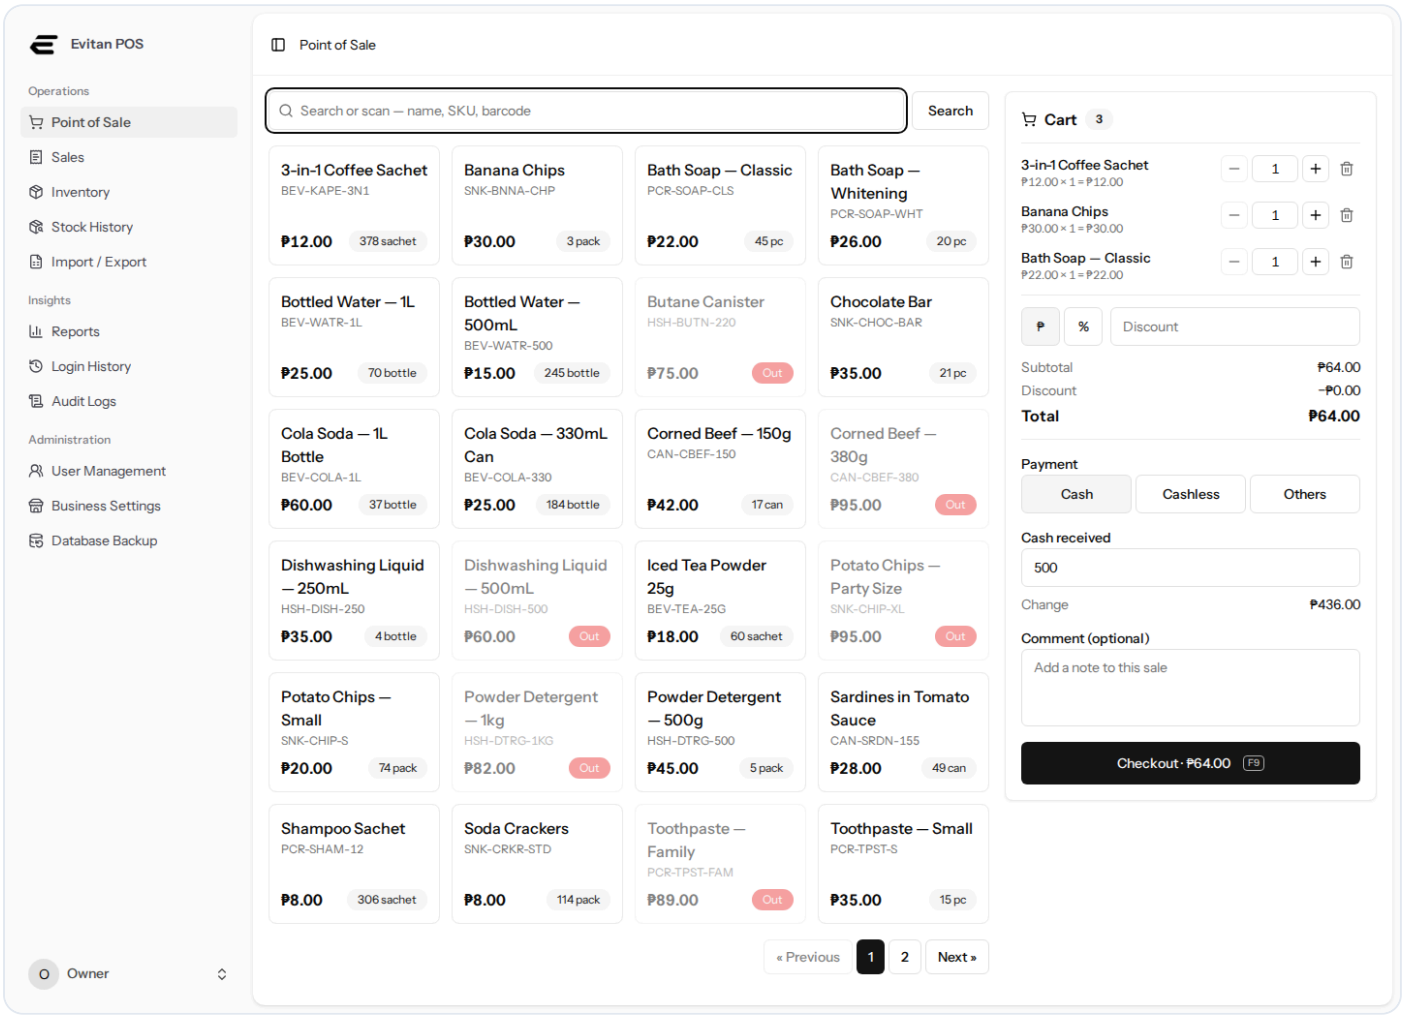

Point of Sale

All staff

What it does — The register. Search or scan products, build a cart, apply a discount, take payment, and check out. Out-of-stock items stay visible but disabled so they can't be oversold, and change is calculated live as cash is entered.

HOW TO USE IT

1. Search by name, SKU, or barcode — or tap a product tile to add it to the cart.
2. Adjust quantities, and apply a discount (fixed amount or percentage) if needed.
3. Choose **Cash**, **Cashless**, or **Others**, enter cash received, and **Checkout** (or press **F9**).
4. A receipt prints automatically when a printer is configured.

SELLING

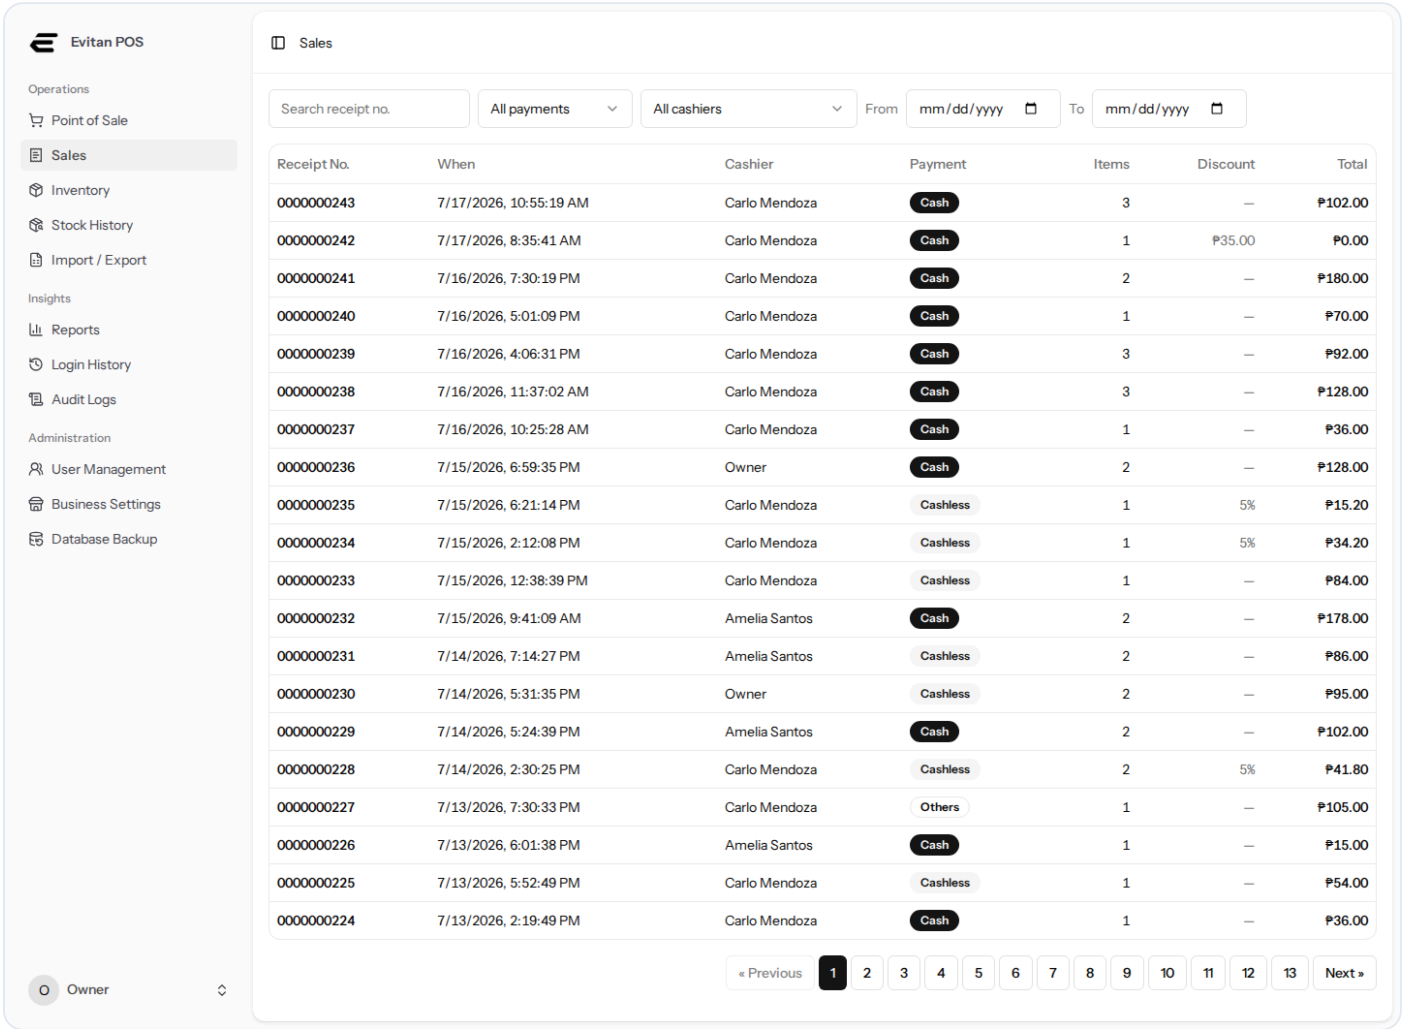

Sales history

All staff

What it does — A searchable record of every completed sale. Filter by receipt number, payment type, cashier, or date range to find any transaction for reprinting or after-sales handling.

HOW TO USE IT

- Search or apply filters to narrow the list.
- Open any row to see the full receipt detail.

SELLING

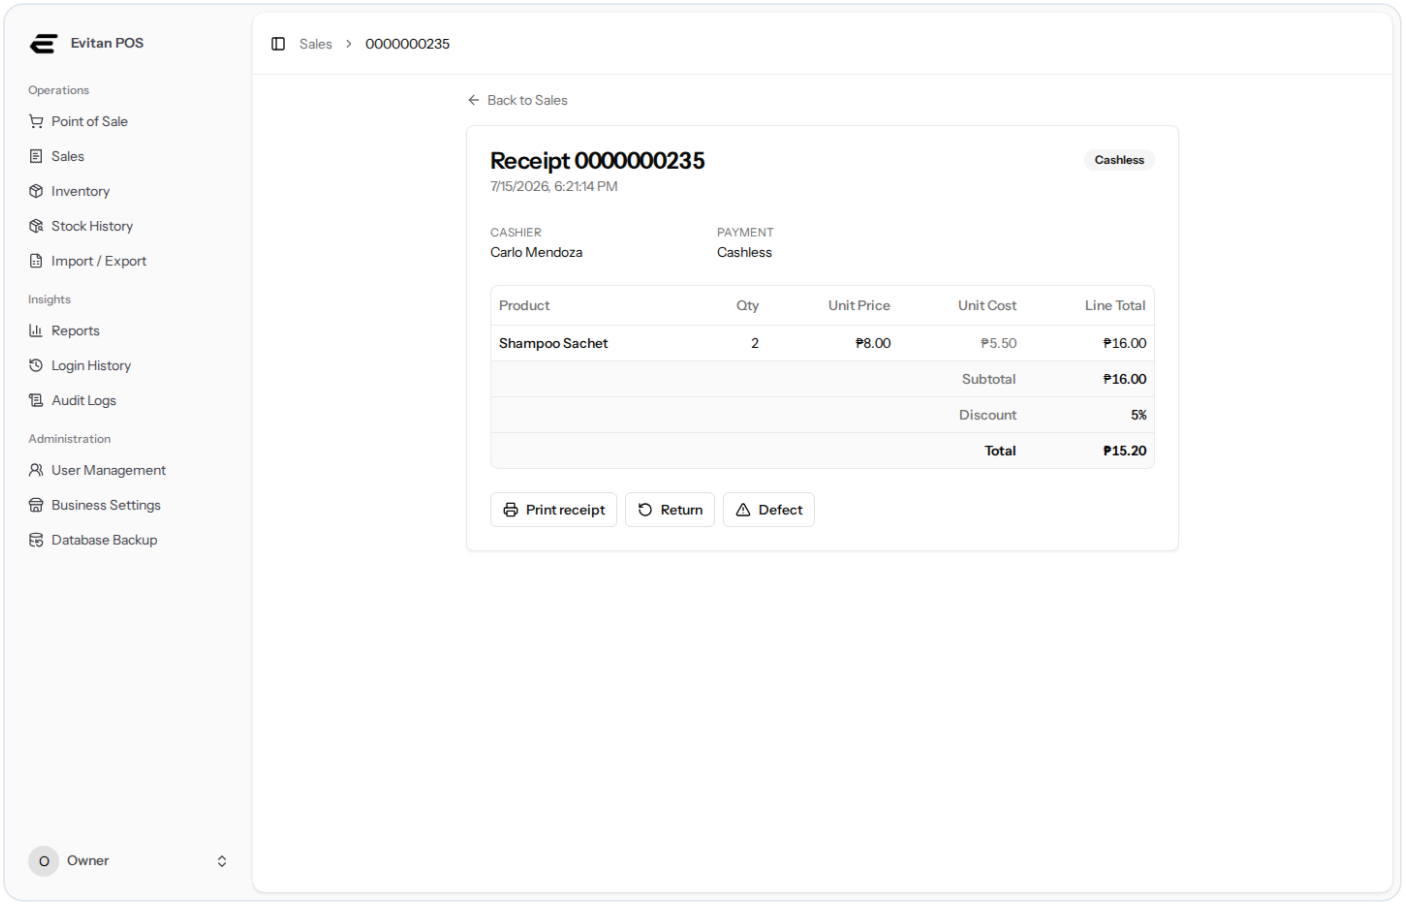

Sale detail & receipt

Cost: Owner only

What it does — The full view of one sale — line items, discount, totals, cashier, and payment type. The Owner additionally sees unit cost here. This screen is also where you reprint a receipt or start a return or defect.

HOW TO USE IT

- Open a sale from history to review it.
- Use **Print receipt** to reprint, or **Return** / **Defect** to start an after-sales event.

SELLING · AFTER-SALES

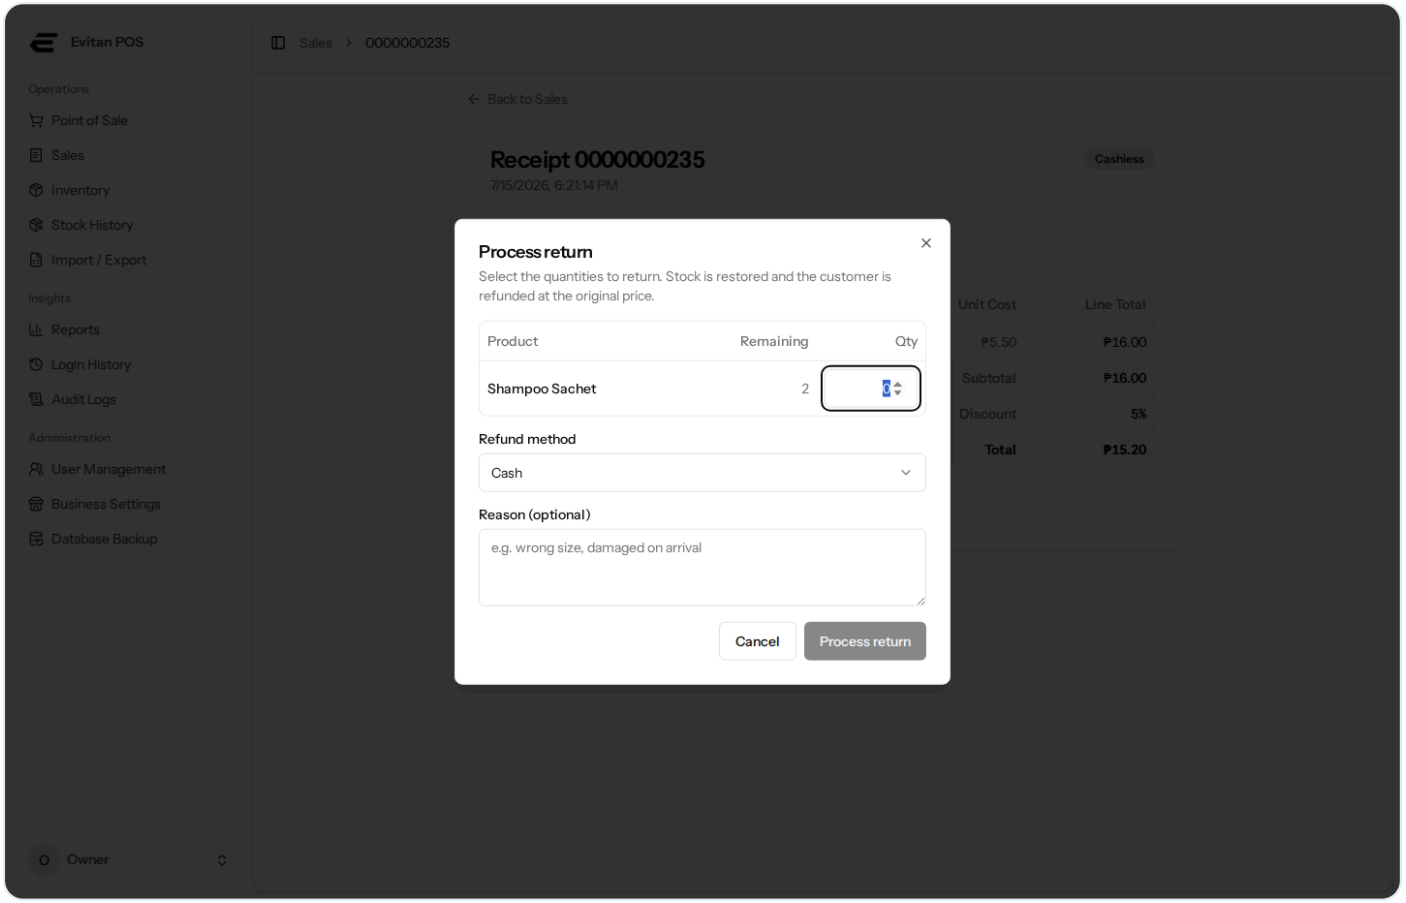

Returns & defects

Defects: Admin & Owner

What it does — Two after-sales actions taken against a sale. A **Return** refunds the customer and puts the stock back on the shelf; a **Defect** writes off damaged goods without restoring stock. Both are permanent, audited records — the original sale is never altered.

HOW TO USE IT

1. On a sale, choose **Return** or **Defect**.
2. Set the quantity per line, pick a refund method, and add an optional reason.
3. Confirm. Refunds are computed to the centavo, correctly accounting for any discount on the original sale.

CATALOG & STOCK

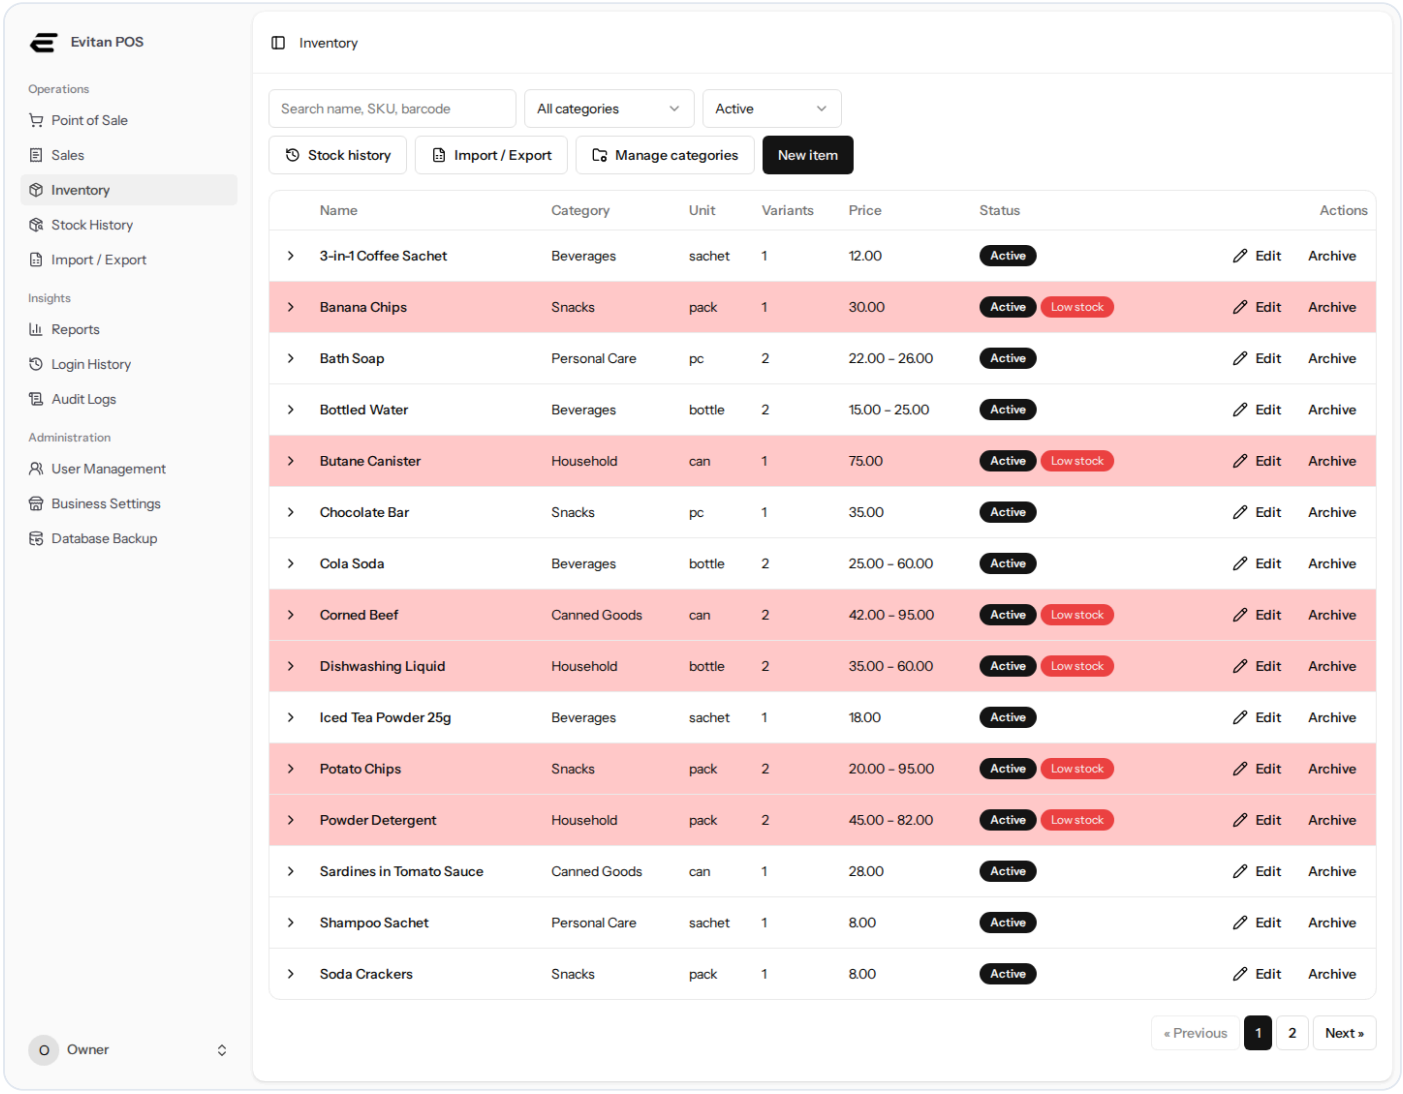

Inventory

Edits: Admin & Owner

What it does — The product catalog. Each item shows its category, unit, variant count, price range, and stock status, with a **Low stock** badge when it drops below its threshold. Items are archived, never deleted, so historical records stay intact.

HOW TO USE IT

- Search or filter by category and status (Active / Archived).
- Use **New item** to add a product, **Edit** to change one, or **Archive** to retire it.
- Stock, price, SKU, and barcode live on each variant, not the item.

CATALOG & STOCK

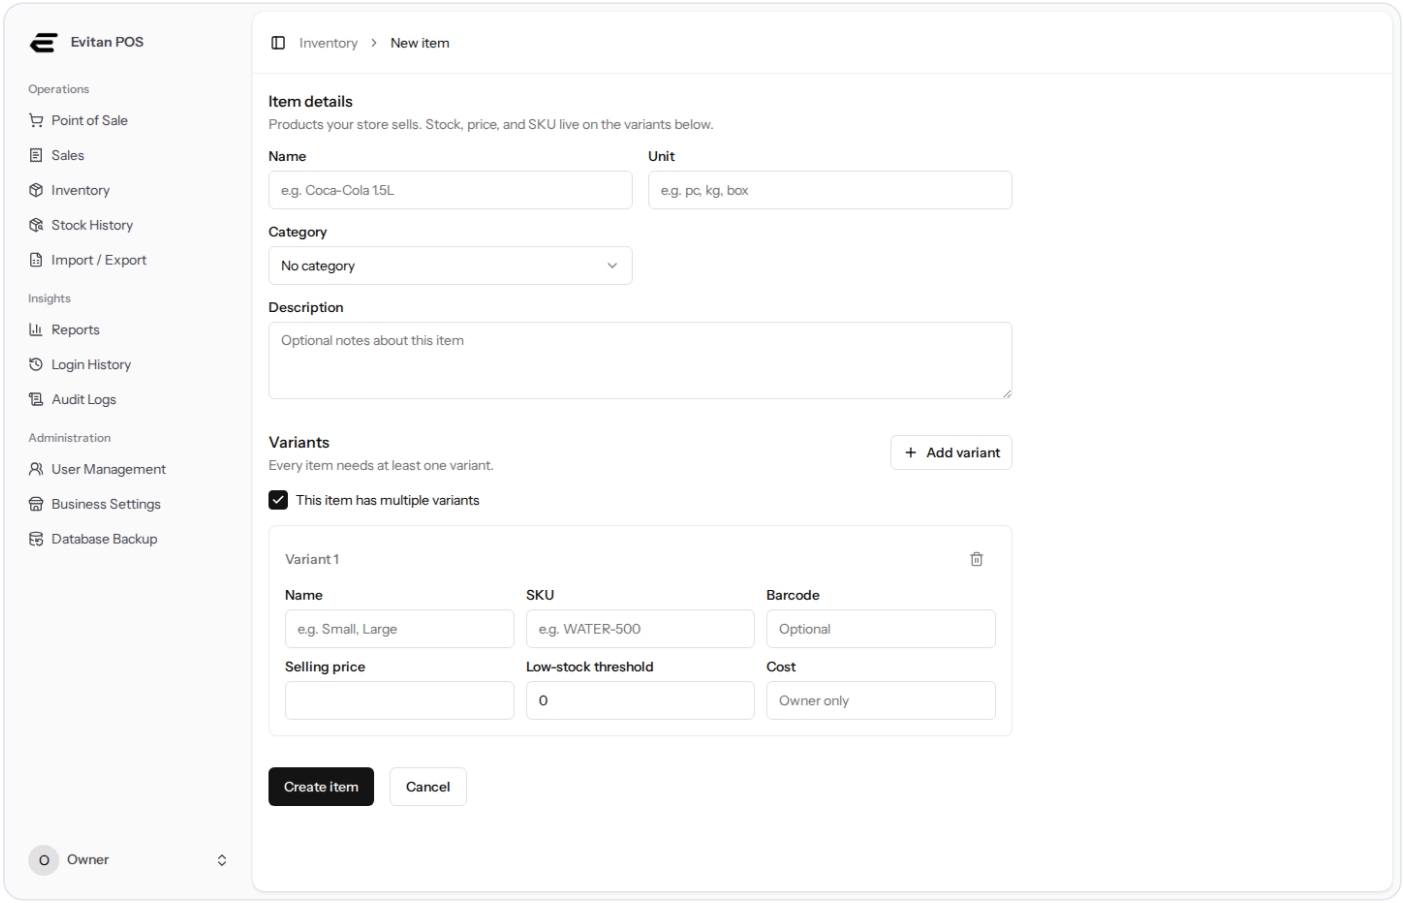

Add & edit products

Cost: Owner only

What it does — Create or update a product. An item can be a single product or carry several named variants (for example Small / Large), each with its own price, SKU, barcode, and stock. Item cost is visible and editable only to the Owner.

HOW TO USE IT

1. Enter the name, category, and unit.
2. Toggle **“This item has multiple variants”** to add variant rows, or leave it off for a single product.
3. Save to publish. Every item always keeps at least one variant.

CATALOG & STOCK

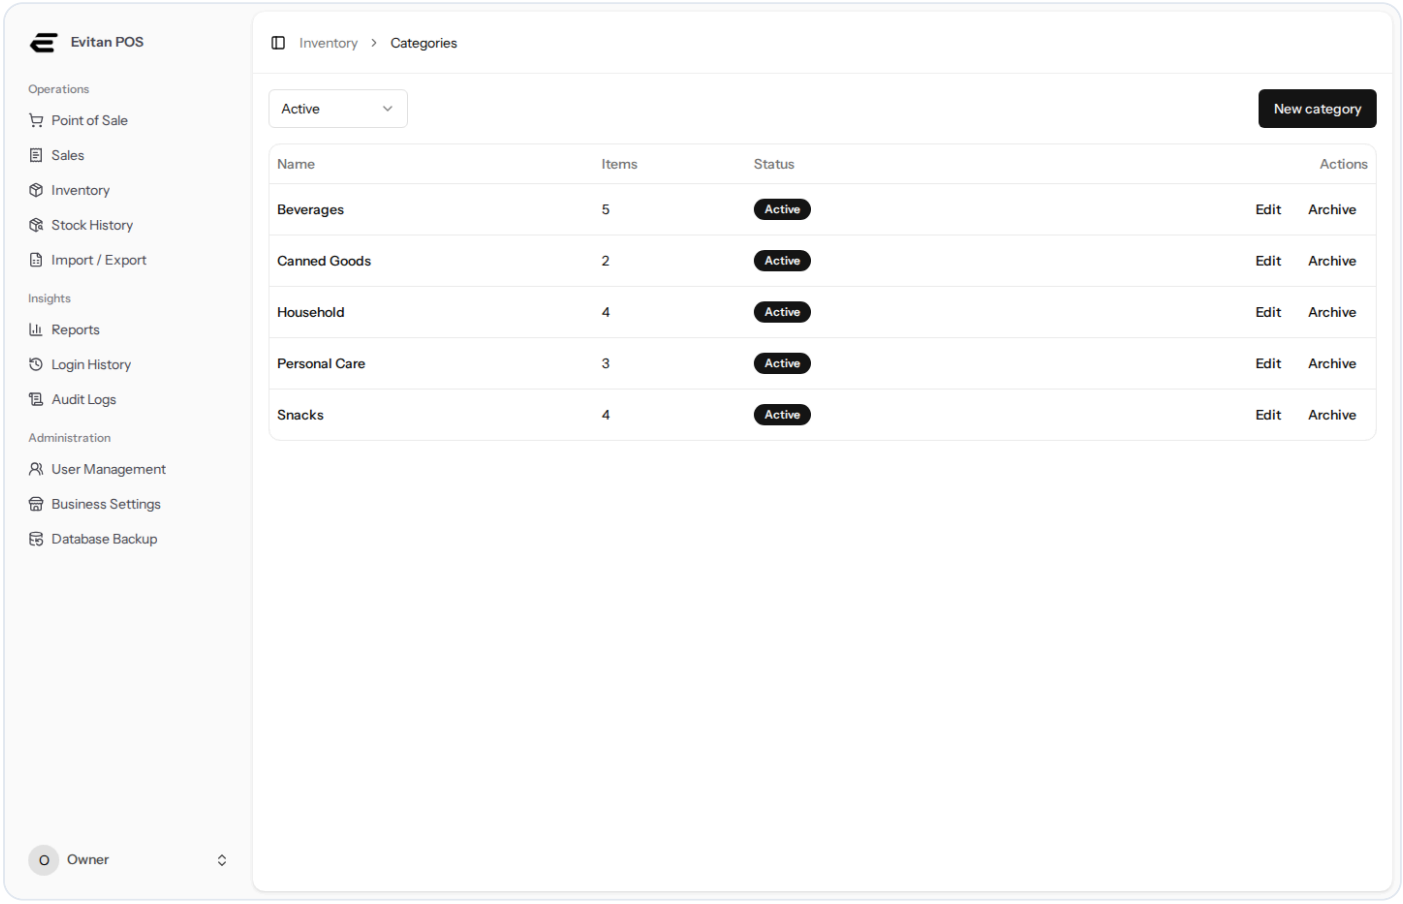

Categories

Edits: Admin & Owner

What it does — Organize products into categories that are used across the catalog, the register, and reports. Like items, categories are archived rather than deleted.

HOW TO USE IT

- Add, rename, or archive categories from this screen.
- Archived categories drop out of default lists but remain on historical records.

CATALOG & STOCK

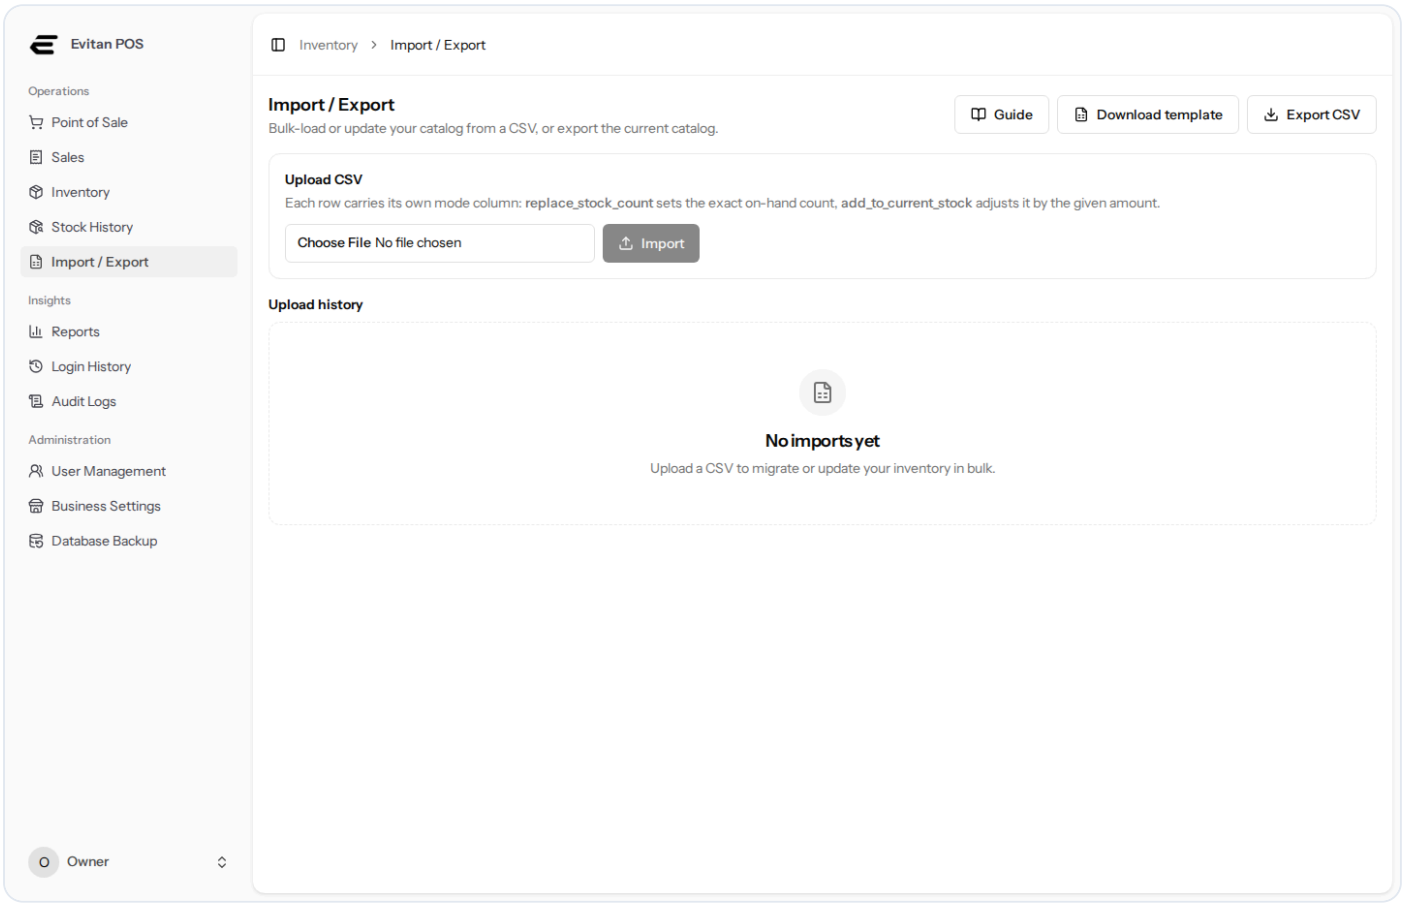

CSV import & export

Admin & Owner

What it does — Bulk-load or update the entire catalog from a spreadsheet, and export the current catalog. Imports are **all-or-nothing** — one invalid row and nothing is saved — and every stock change flows through the same ledger as any other movement.

HOW TO USE IT

1. Use **Download template**, fill in your products, and upload the file.
2. Each row's **mode** column decides whether stock is set to an exact count or added to the current amount.
3. Use **Export CSV** to pull the current catalog out at any time.

CATALOG & STOCK

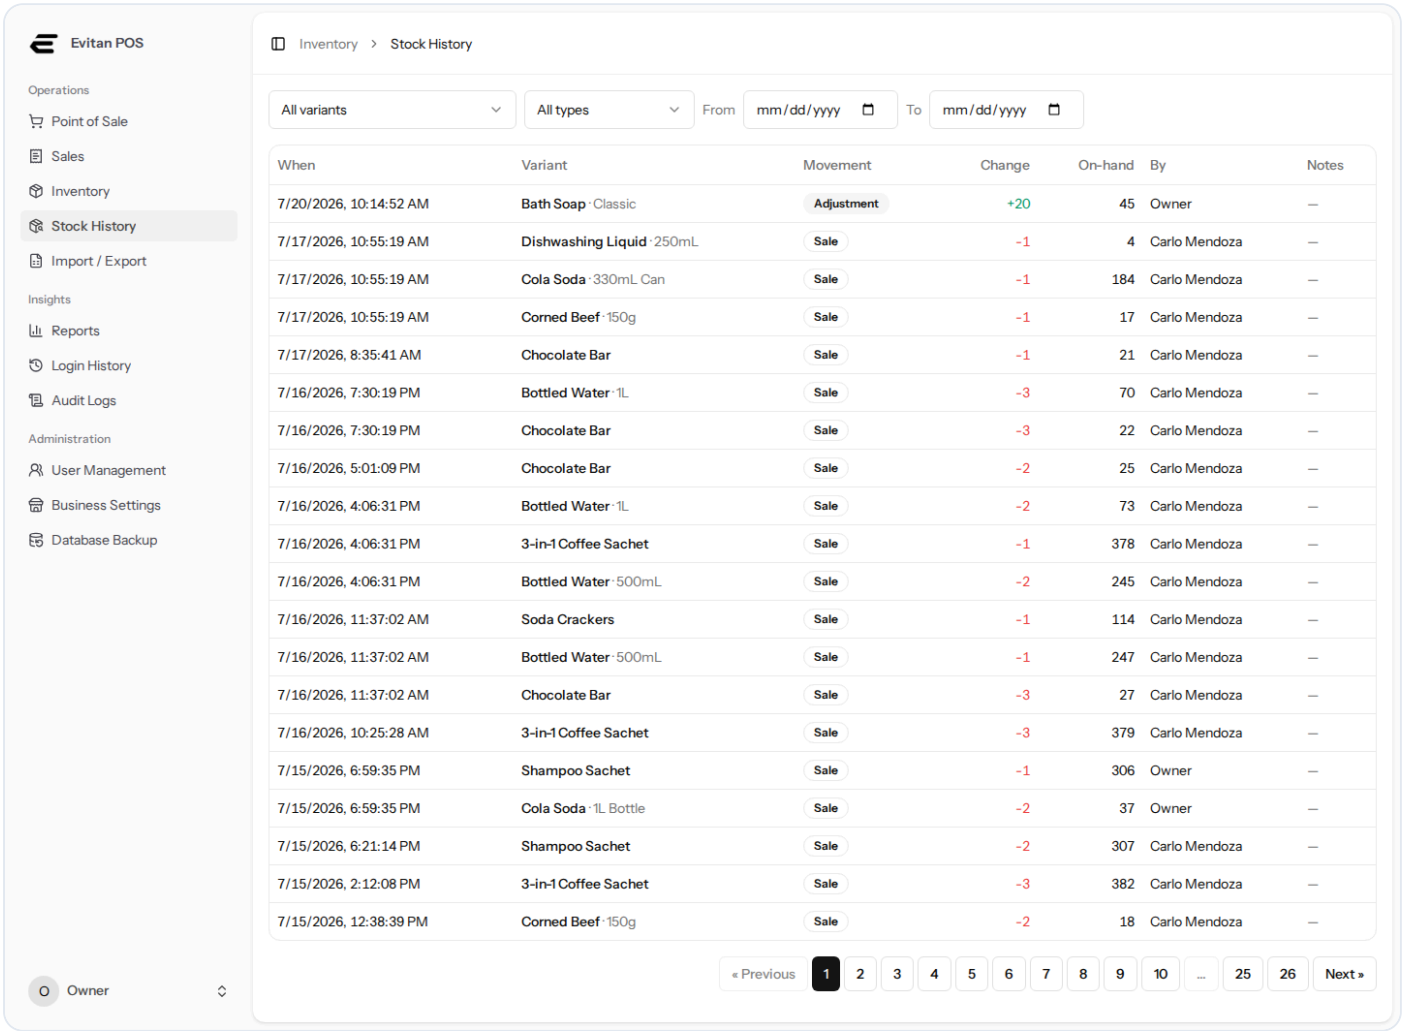

Stock history

All staff

What it does — The inventory ledger — an append-only log of every stock movement: sales, returns, defects, manual adjustments, and imports. Each row shows the change, the resulting on-hand, who made it, and why. This is the single source of truth for stock, and it is never edited.

HOW TO USE IT

- Filter by variant, movement type, or date range.
- Open a per-product view via the **History** action on any variant in Inventory.

INSIGHTS

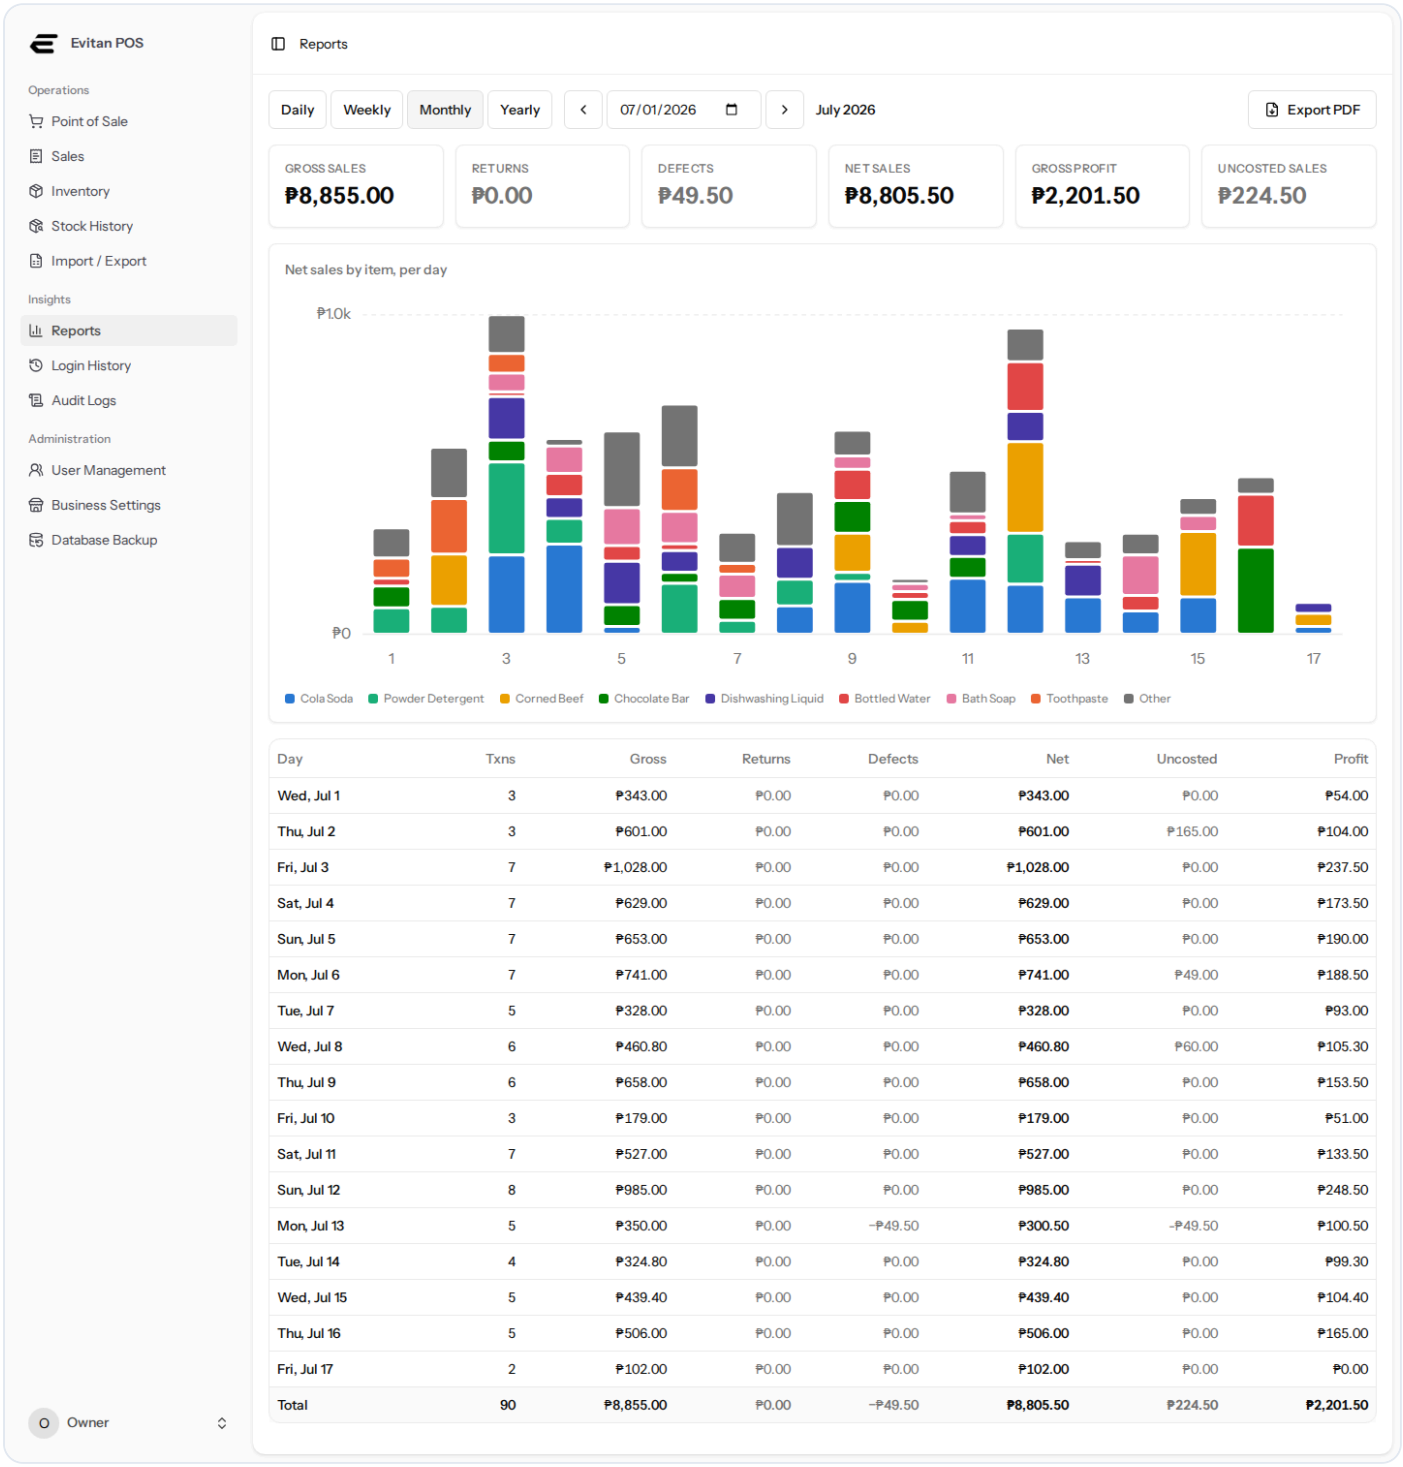

Reports

Profit: Owner only

What it does — Sales analytics recomputed from source data — never a single stored total. Switch between **Daily, Weekly, Monthly, and Yearly**, step between periods, and see gross sales, returns, defects, and net, with a stacked-by-item chart and a full breakdown table. Owners also see gross profit and uncosted sales.

HOW TO USE IT

- Pick a granularity, then step to the period you want with the arrows.
- Use **Export PDF** for a print-ready copy of the current report.

Day	Txns	Gross	Returns	Defects	Net	Uncosted	Profit
Wed, Jul 1	3	₱343.00	₱0.00	₱0.00	**₱343.00**	₱0.00	**₱54.00**

INSIGHTS

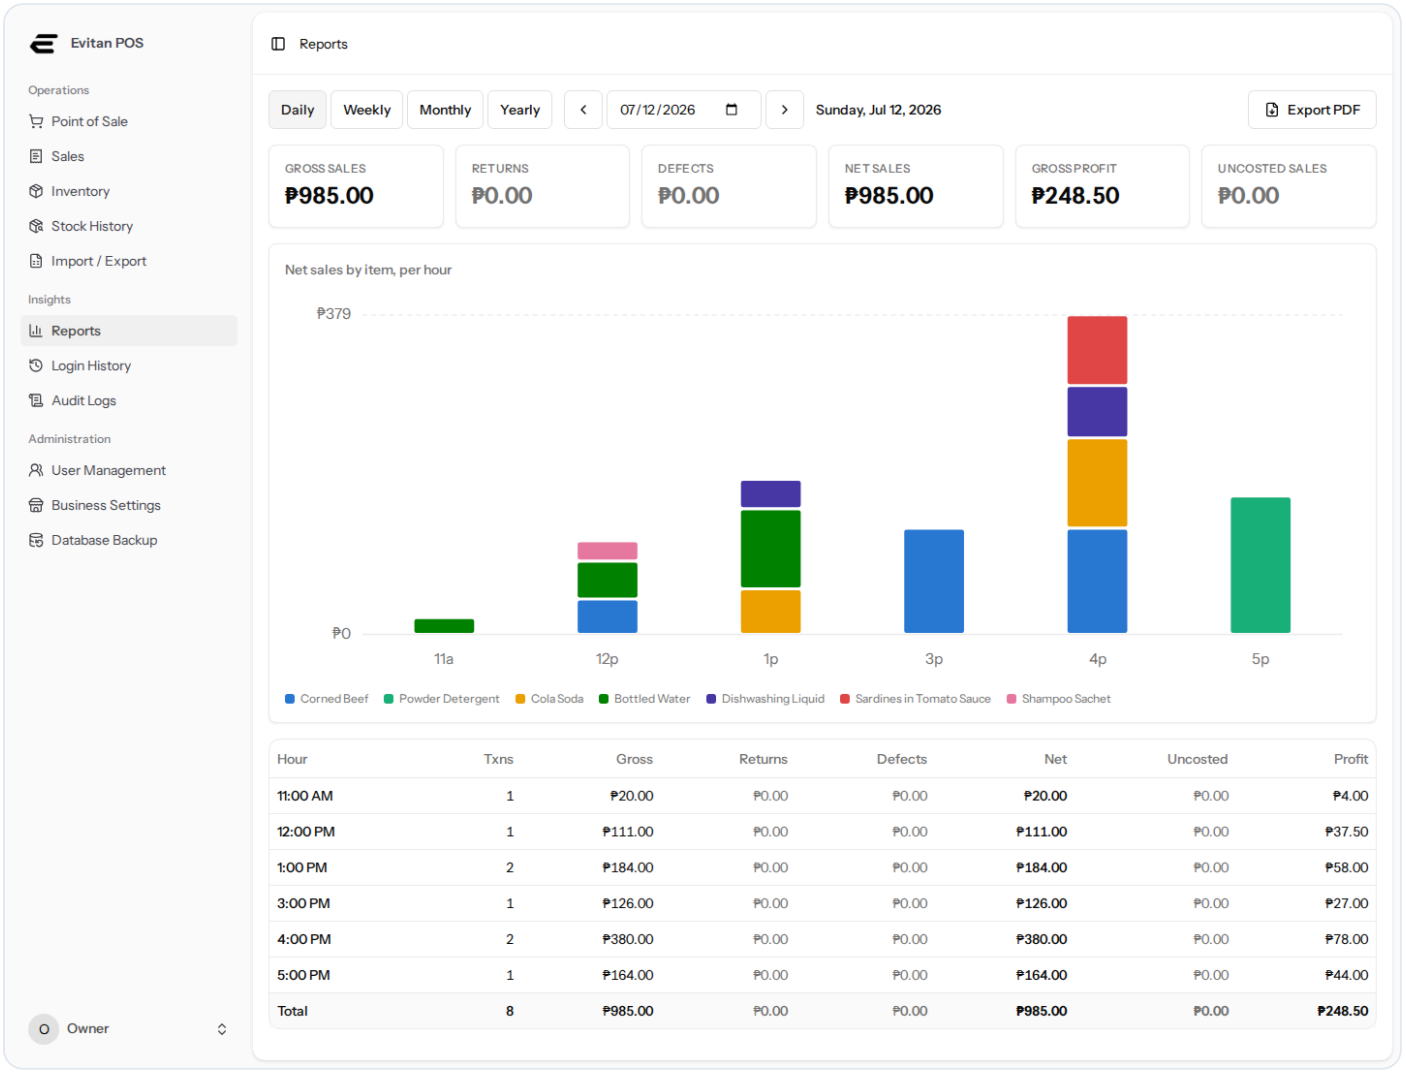

Reports — drill-down

Admin & Owner

What it does — The same report at day resolution, drilling down to hourly buckets — handy for spotting peak selling hours. Net is always gross minus returns minus defects, attributed to the day each event actually occurred.

HOW TO USE IT

- Choose **Daily** and step to any date; the chart and table break the day down by the hour.
- Weekly and Monthly views drill down to days; Yearly drills down to months.

Hour	Txns	Gross	Returns	Defects	Net	Uncosted	Profit
11:00 AM	1	₱20.00	₱0.00	₱0.00	₱20.00	₱0.00	₱4.00
12:00 PM	1	₱111.00	₱0.00	₱0.00	₱111.00	₱0.00	₱37.50
1:00 PM	2	₱184.00	₱0.00	₱0.00	₱184.00	₱0.00	₱58.00
3:00 PM	1	₱126.00	₱0.00	₱0.00	₱126.00	₱0.00	₱27.00
4:00 PM	2	₱380.00	₱0.00	₱0.00	₱380.00	₱0.00	₱78.00
5:00 PM	1	₱164.00	₱0.00	₱0.00	₱164.00	₱0.00	₱44.00
Total	8	₱985.00	₱0.00	₱0.00	₱985.00	₱0.00	₱248.50

ADMINISTRATION

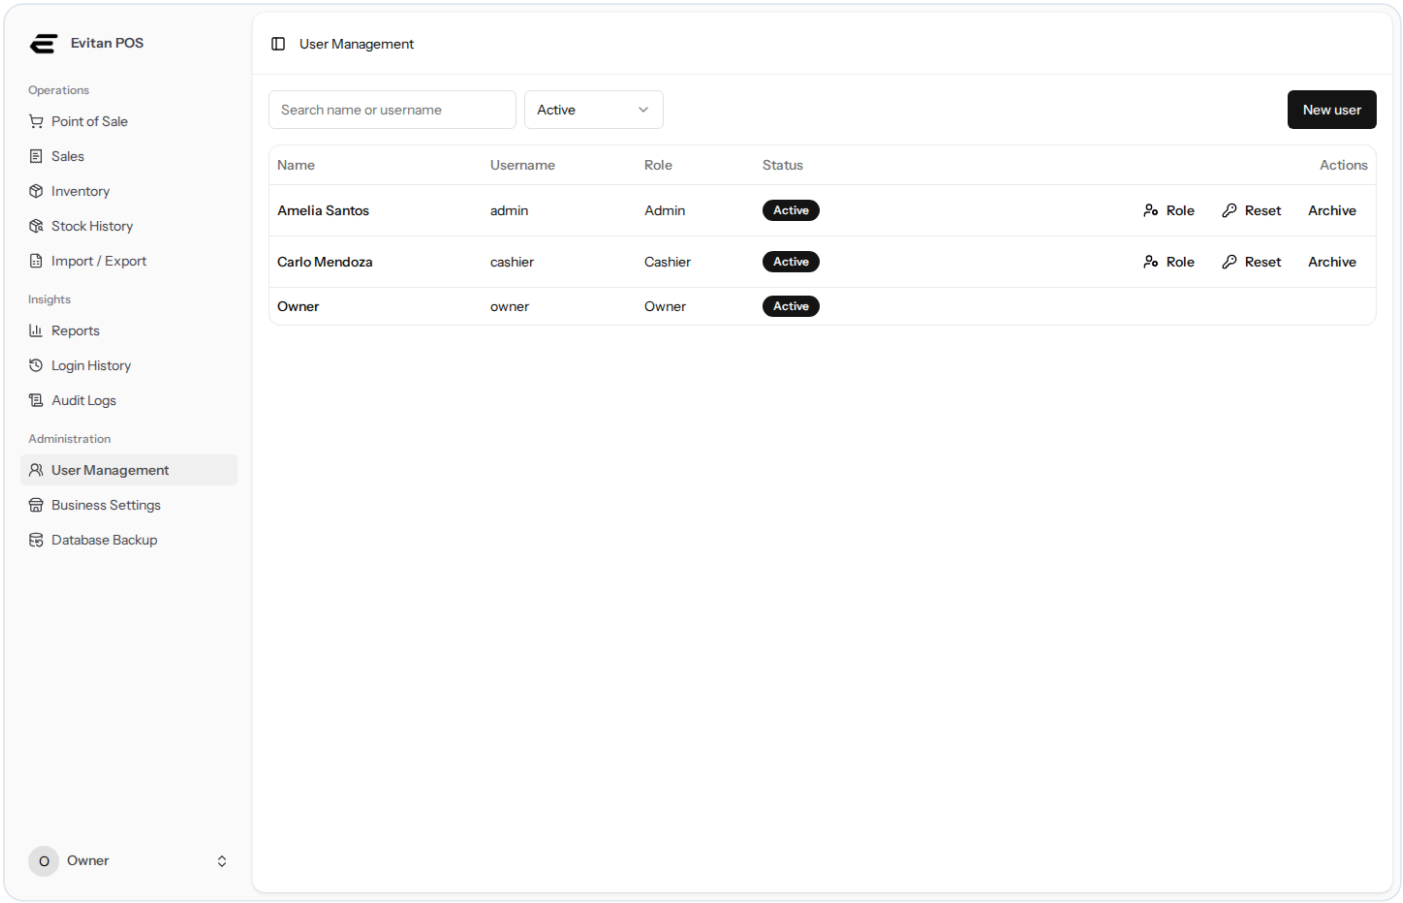

User management

Admin & Owner

What it does — Create staff accounts, assign roles, reset passwords, and archive users. The rules enforce the hierarchy: you can only manage roles below your own, there is always exactly one Owner, and archived users still appear in sales and logs.

HOW TO USE IT

- Add a user with a role, or use row actions to change a role, reset a password (which signs that user out), or archive/restore.
- An Admin can manage Cashiers; only the Owner can manage Admins.

ADMINISTRATION

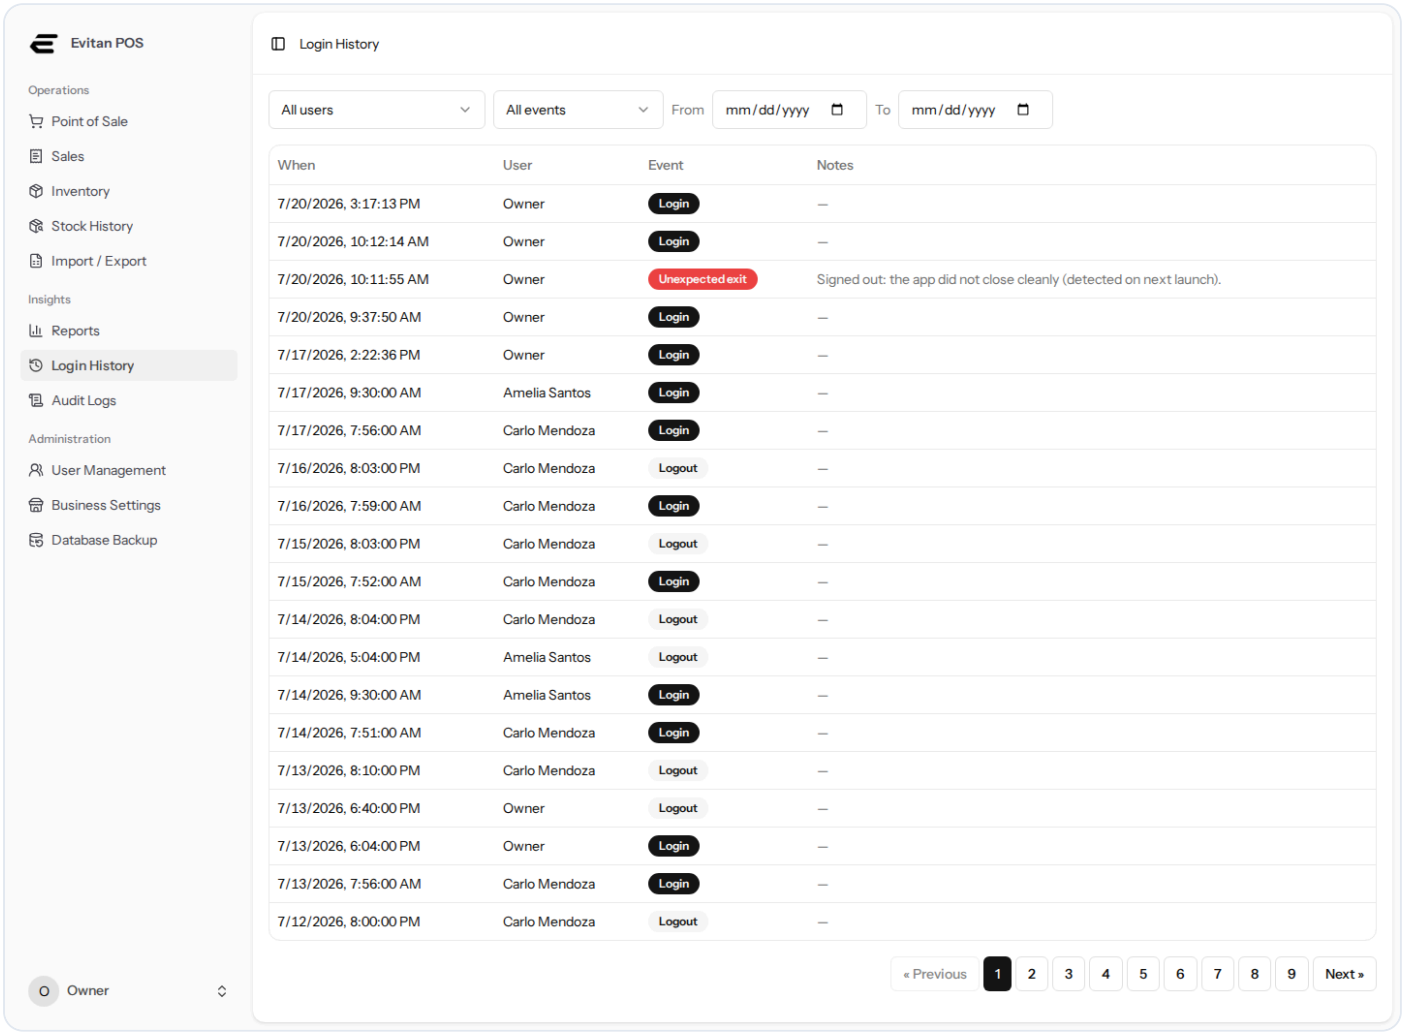

Login history

All staff · own events

What it does — A record of sign-in and sign-out events, including sessions ended by a crash or power loss. Cashiers see only their own activity; Admins and the Owner see everyone's.

HOW TO USE IT

- Review the list to audit who accessed the system and when. It's read-only.

ADMINISTRATION

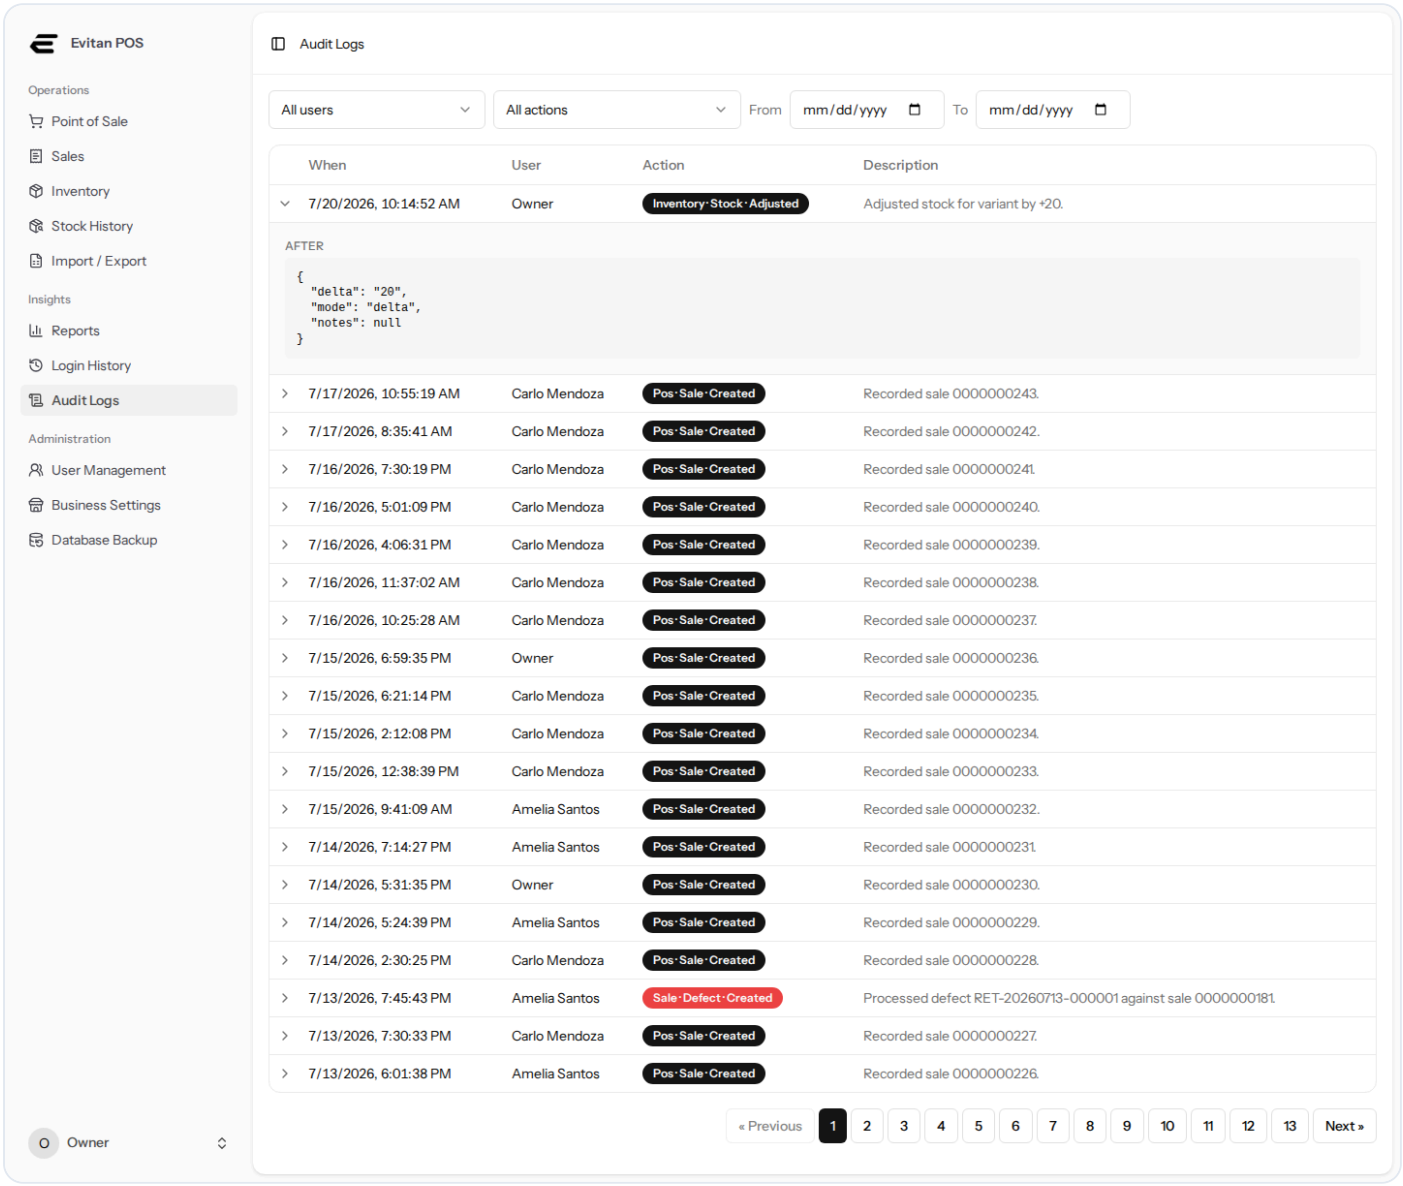

Audit logs

Admin & Owner

What it does — An immutable trail of every significant action — sales, returns, stock adjustments, imports, user and settings changes, and backups. Each entry records who, when, and what, with an expandable before/after view. Cost values are hidden from anyone but the Owner.

HOW TO USE IT

- Filter by user, action, or date range.
- Expand a row to see the exact change that was made.

CONFIGURATION

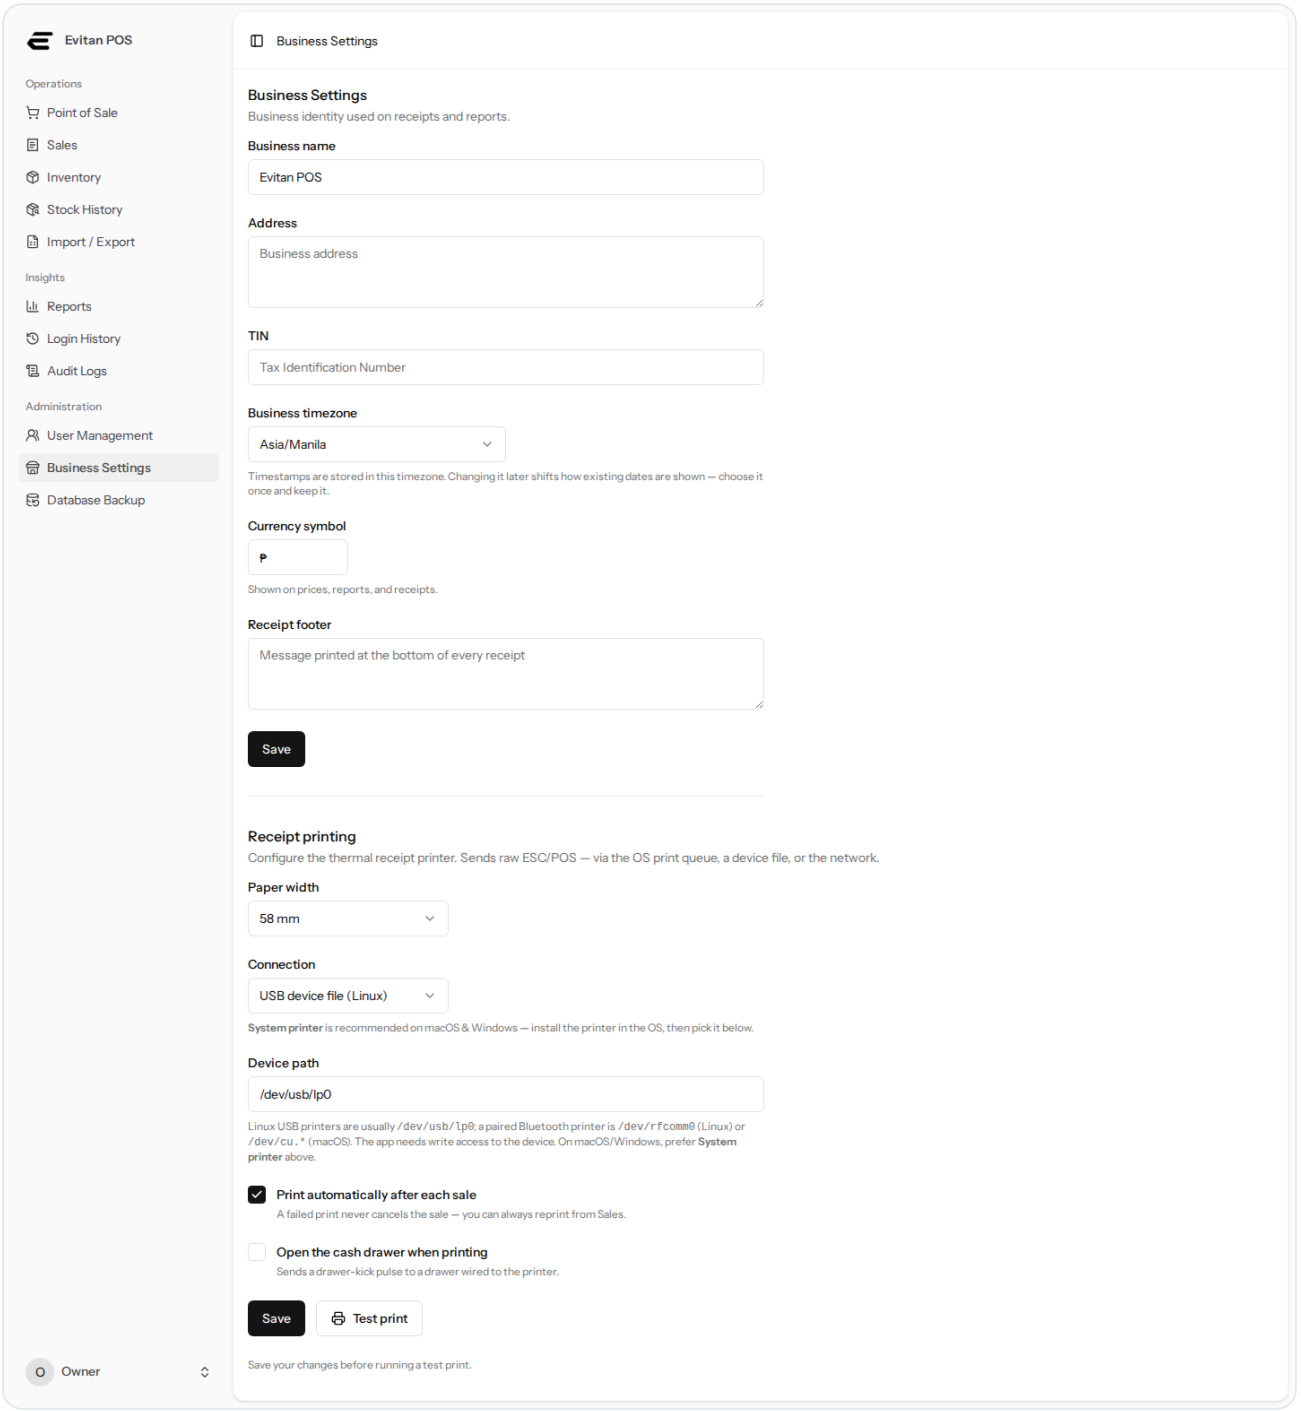

Business settings & printing

Owner only

What it does — The Owner's control panel for business identity (name, address, TIN), localization (timezone, currency), the receipt footer, and the thermal receipt printer. Printing sends raw ESC/POS straight to the device — and a failed print never cancels a completed sale.

HOW TO USE IT

- Edit the identity and localization fields, then **Save**.
- For printing, choose paper width and connection (system queue, USB device, or network), set auto-print and cash-drawer options, and use **Test print** to verify.

CONFIGURATION

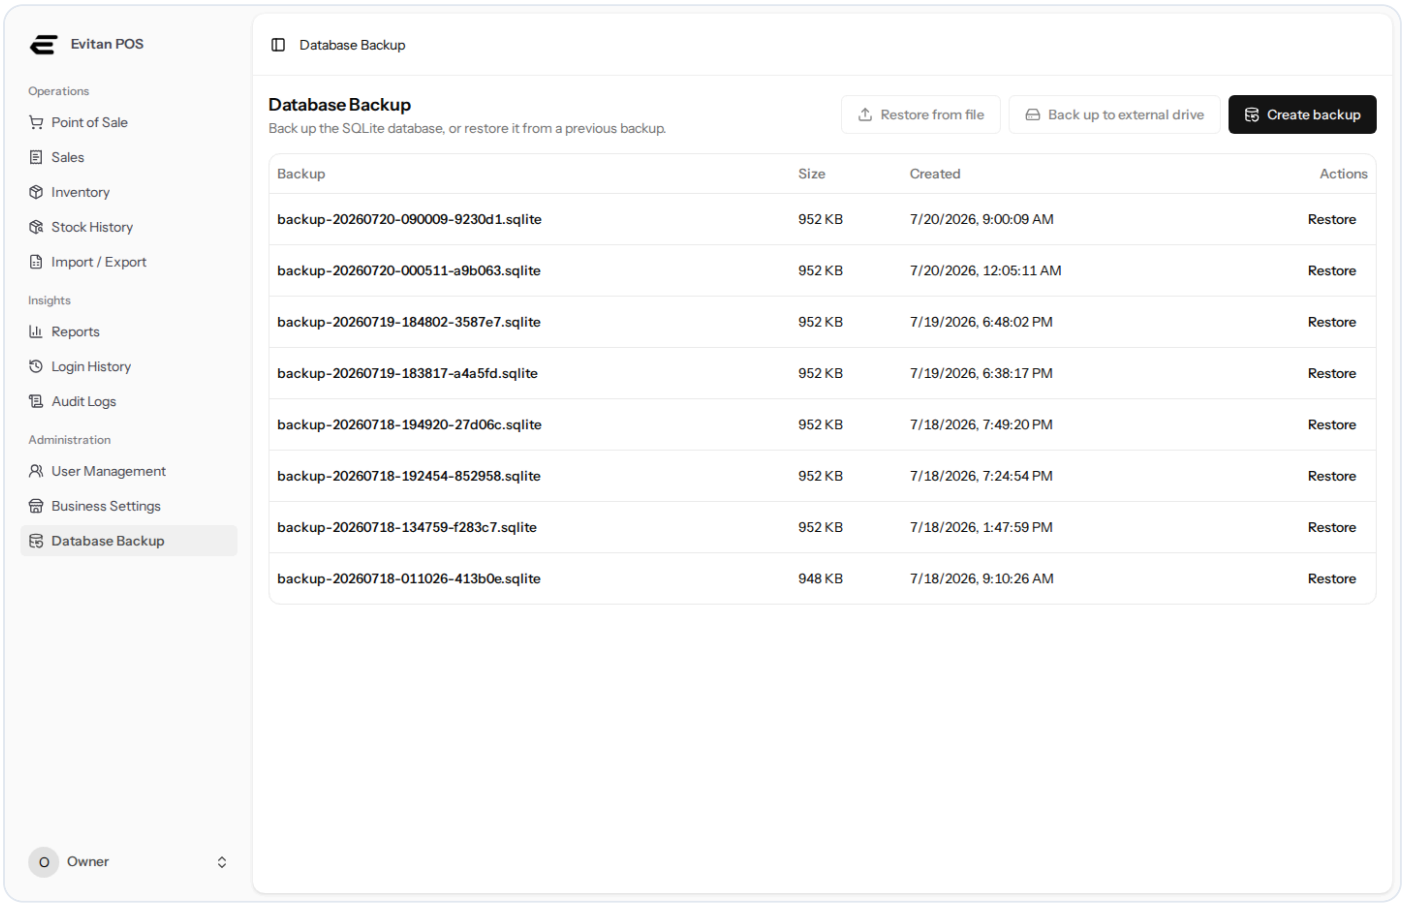

Database backup & restore

Owner only

What it does — One-click backup and restore of the entire database, including export to an external drive. A safety backup is taken automatically before any restore, so a bad restore can't lose your data.

HOW TO USE IT

- Select **Create backup** to snapshot the database; restore from the list when you need to.
- Because everything runs locally, regular backups are your recovery plan — keep a copy on an external drive.

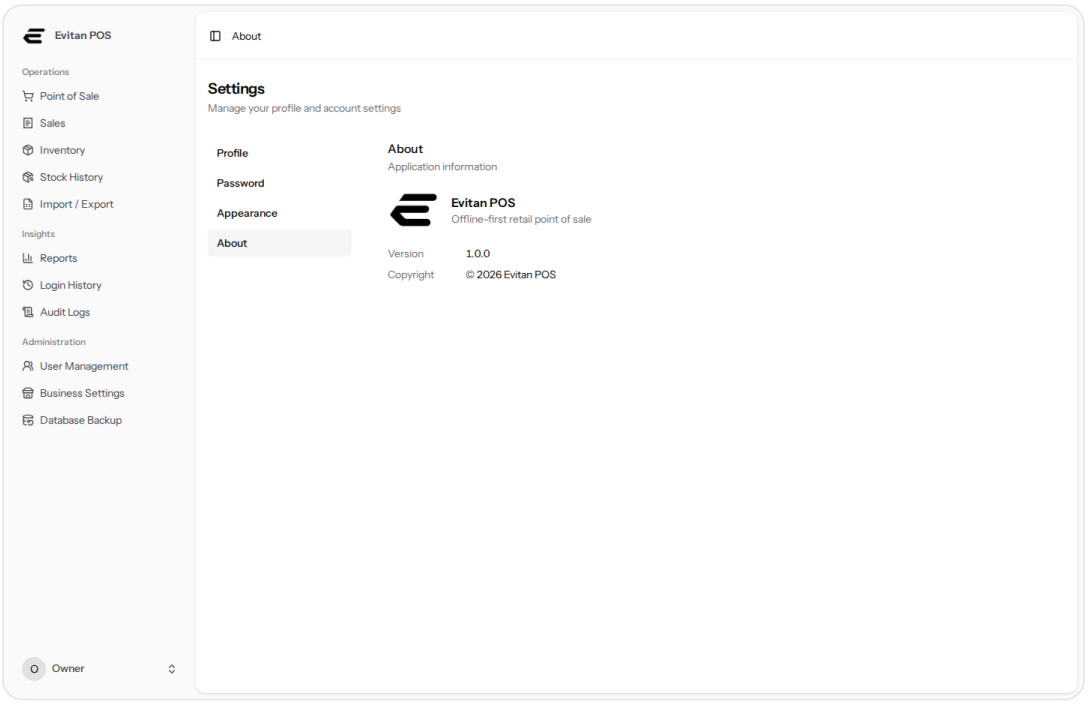

CONFIGURATION

About

All staff

What it does — Application information — version and build details, useful for support and record-keeping.

CONFIGURATION

Appearance

All staff

What it does — Per-user display preferences — switch between light, dark, and system themes. The choice is remembered on this machine.
